Justin De Burgo	Justin will be responsible for programming the app and prioritize the UX. Users should have a seamless and great experience on our app and Justin will make sure of this. Justin will also be the go-to for questions on programming in Kotlin as he is the most comfortable with it.
Kuami Aba	I (Kuami) will be responsible for outlining and planning the building of the app. I will make sure we are using the right components and have everything we will need. I will also aid Kuami in building the app and designing the UI. I'll also make sure we're on track in terms of our timeline and getting the project done on time.
Amadou Wade	Amadou will be responsible for testing of our features. He will come up with test cases and provide a detailed proof of concept that shows his tests covers general cases for the app prototype. He will review the code and find bugs/errors as well.

Signed by Kuami Aba
